Continuation of 11, does NOT place the application in condition for allowance because: On pages 13-14 in regards to the independent claims, Applicant argues that there is no suggestion or motivation to combine the cited references stating users having input devices that could share information between each other would be of no benefit or value to Bjurstrom et al. or Chiu et al stating that Bjurstrom et al. and Chiu et al. are concerned with browsing HTML pages. However, the Examiner disagrees.

In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See In re Fine, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988)and In re Jones, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992).

According to the Examiner based on the Applicant's argument that neither of cited references has no value since the references are "concerned with browsing HTML pages." However, according to the preamble and claim limitations of the independent claims, it clearly states "browsing system to browse a hypertext document" and the claim limitation use the elements "hypertext document." Examiner respectively expressly sees an HTML pages as a hypertext document thus Bjurstrom et al, and/or Chiu et al are within the same field of endeavor of the Applicant's invention since as the Applicant clearly admits, the cited references are concerned with browsing HTML (hypertext documents) and have thus have suggestion to combine. Therefore, in regards to Applicant arguing Buckley shows no suggestion or motivation to combine with Bjustrom and Chui, the Examiner disagrees.

As stated, Bjurstrom et al and Chui et al fail to specifically disclose wherein the shared display module is simultaneously viewable by a plurality of user which each user is simultaneously interacting with a different portable input device. As the claim states, the users' input device don't interact with the shared displayed, just that the user is interacting with their portable input device, and that the shared display device is viewable by the same time by at all. Thus, Buckley discloses a shared display screen simultaneously viewable by a plurality of users (FIG1; Page 4, lines 9-11) of which users are interacting simultaneously with their own input device. (FIG 6B-6D; Page 9, line 30 - Page 10, line 5: Discloses different embodiments of users simultaneously interacting with a different portable input device being PDAs (Page 1, lines 27-30)) In addition, Buckley discloses the ability for users to change the shared display from their own device. (Page 1, lines 27-30; Page 4, lines 16-20, Page 5, lines 5-14) Furthermore, Buckley is in the same field of endeavor as the Applicant's invention since Buckley browses hypertext documents with the shared displayed which is viewable by many users (e.g. FIG 6, 7, Pages 11, line 26-Page 12, line 8). Therefore, there is motivation to combine Buckley with Bjurstrom and Chiu et al.

It would have been obvious to one of ordinary skill in the art at the time of Applicant's invention to have modified Bjurstrom et al's method and Chiu et al's method with Buckley et al's ability for users to interact with their own device and for the users to be able to view a shared display since it provides the benefit of allowing users interact with on their own device independently which has the ability to share information among a shared environment by allowing user send their information to a shared display, and allowing users to retrieve the information from the shared display. In addition, the shared display provides the opportunity for plurality of users to web browse the Internet as one by allowing each person from each of their input device to display web pages (hypertext document) onto the shared display wherein the other users have the ability to view the web pages at the same time. Therefore, there is motivation to combine Buckley with Bjurstrom and Chiu et al.
